Data Handling · Worksheet

Showing Data: The Big Club Party 🎉

Name: _____

Date: _____

Score: _____ / 45

The club is throwing a big party, and **you** are the Party Planner! A good planner doesn't guess. She asks, counts, draws and then decides. Every task is one step of your plan. Tasks marked Level 2 are core; Level 3 ones are stretch questions.

📋 Task 1: The Snack Survey Level 2

You asked all **30 club members**: *"What is your favourite party snack?"* Here are their answers in the order you heard them. Tick each one off as you count it, and make a tally mark in the table.

1. Samosa	7. Samosa	13. Pani puri	19. Pani puri	25. Pizza
2. Pizza	8. Pizza	14. Pizza	20. Samosa	26. Sandwich
3. Chips	9. Pani puri	15. Chips	21. Chips	27. Chips
4. Pani puri	10. Chips	16. Sandwich	22. Pizza	28. Pani puri
5. Pizza	11. Pizza	17. Samosa	23. Pani puri	29. Samosa
6. Sandwich	12. Samosa	18. Pizza	24. Samosa	30. Pizza

Snack	Tally	Frequency
🍕 Pizza		
🥟 Samosa		
🫓 Pani puri		
🍟 Chips		
🥪 Sandwich		
Total		

a) Add up the frequency column. Total = _____ . Why is this a useful check? _____

_____

b) How many fewer children chose sandwich than pizza? _____

c) What fraction of the club chose pizza? Write it in its simplest form. _____

🥤 Task 2: Reading a Pictograph Level 2

Brothers and sisters are invited too, so there are **40 guests**. Your friend asked each guest which drink they want. Look carefully at the key, and watch out for half cups.

Mango juice	🥤 🥤 🥤
Lassi	🥤 🥤 🥤
Rose milk	🥤 🥤
Lemonade	🥤 🥤
Buttermilk	🥤

Key: 🥤 = 4 guests

a) How many guests chose lassi? _____

b) How many more chose mango juice than lemonade? _____

c) How many guests are shown altogether? _____

d) If the key were 🥤 = 2 guests, how many cups would lassi need? _____

e) Which two drinks together were chosen by exactly **half** of the guests? Circle one. Level 3

◯ Lassi and Lemonade ◯ Mango juice and Rose milk ◯ Lassi and Rose milk

◯ Mango juice and Buttermilk

⭐ Task 3: Draw a Pictograph Level 2

The club voted for the party game. Draw the results as a pictograph using the key ⭐ **= 4 votes**. You will need some half stars.

Game	Votes
Treasure hunt	14
Musical chairs	8
Dumb charades	6
Tug of war	2

Treasure hunt	
Musical chairs	
Dumb charades	
Tug of war	

Key: ⭐ = 4 votes

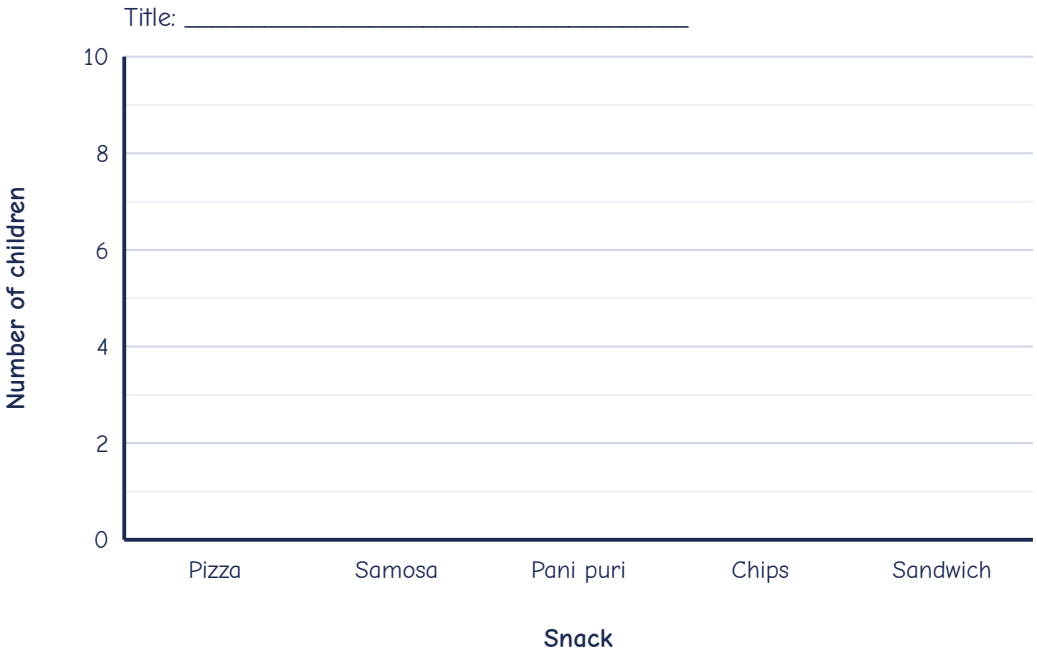

🤔 **Think about it** Level 3 Why would a key of ⭐ = 5 be awkward for this data?

_____

_____

📊 Task 4: Draw a Bar Graph Level 2

Use your frequency table from Task 1 to draw a bar graph of the snack survey. Write a title, then draw each bar with a ruler. The scale goes up in 2s, so an odd number ends halfway between two numbered lines.

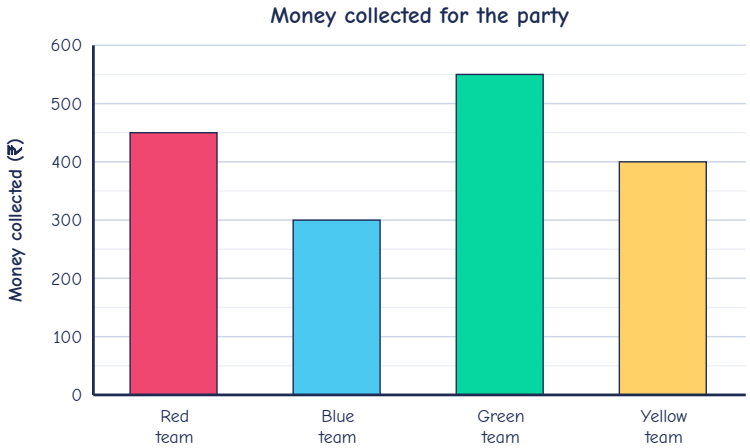

🤔 **Think about it** Level 3 Why is counting in 2s a better scale here than counting in 1s or in 10s?

_____

_____

💰 Task 5: Reading a Bar Graph Level 2 Level 3

Each team collected money for the party. The party costs **₹2,000**. Each small grid line is worth ₹50.

a) Green team collected: ₹ _____

b) All four teams collected: ₹ _____

c) How much more is needed for the party? ₹ _____

d) If the total were shared equally, each team's share: ₹ _____

e) Two **different** pairs of teams each collected exactly ₹850 together. Name both pairs. Level 3

_____

f) Which question can **not** be answered from this graph? Circle one. Level 3

◯ Which team collected the least? ◯ How many children are in the Green team?

◯ Did any team collect more than ₹500? ◯ How much did Red and Blue collect together?

Task 6: The Double Bar Graph Level 3

The party is over! For each snack, this graph shows how many plates you **ordered** and how many were **eaten**.

a) Which snacks were completely finished? _____

b) How many plates of chips were left over? _____

c) How many plates were left over altogether? _____

d) What fraction of the sandwiches was eaten? (simplest form) _____

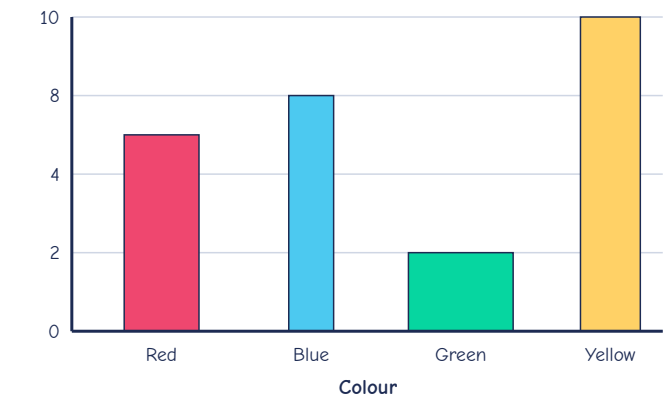

e) How many plates of samosa should you order next time? Use the data to explain why.

_____

_____

🕵️ Task 7: Data Detective Level 3

Case 1: The careless balloon graph. Your cousin drew this graph. Tick **every** real mistake.

- ☐ It has no title.
- ☐ The bars are different colours.
- ☐ The numbers on the side don't go up evenly.
- ☐ The bars are not all the same width.
- ☐ There are gaps between the bars.
- ☐ The side axis has no label.

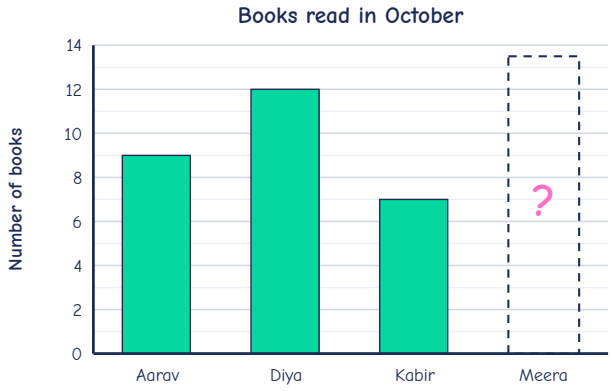

Case 2: The tricky raffle graph.

Raju says, *"Team A sold twice as many tickets as Team B!"* Is he right? Explain.

What would make this graph honest?

Case 3: The missing bar.

The four friends read **36 books** altogether in October. How many books did Meera read? Show your working.

🧩 Task 8: Word Box Level 2

Fill each blank with a word from the box. Each word is used once.

scale | survey | title | key | double bar graph | frequency | data | axis | tally

1. Asking people a question and recording their answers is called a _____ .
2. The answers we collect are called _____ .
3. Marks drawn in groups of five to count quickly are called _____ marks.
4. The number of times an answer appears is its _____ .
5. In a pictograph, the _____ tells you how many each picture stands for.
6. On a bar graph, the _____ tells you what each grid line is worth.
7. The line along the bottom or the side of a graph is called an _____ .
8. Every graph needs a _____ so readers know what it is about.
9. To compare two sets of data side by side, use a _____ .

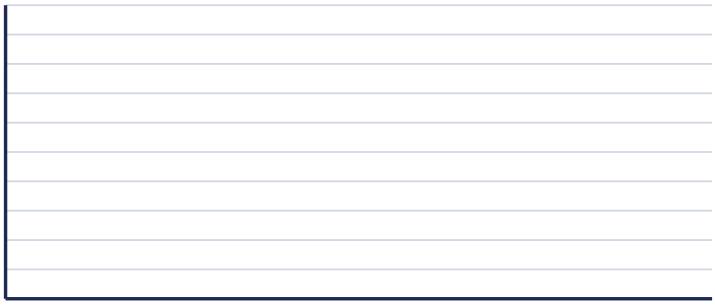

🎨 Task 9: Your Own Survey Level 3

Think of a question, ask at least 15 people, tally the answers and draw a bar graph. Choose your own scale.

Q My survey question: _____

Answer	Tally	Frequency

Title: _____

✓ One thing my graph shows: _____
